

Fresh Start Private:

Fresh Start Private™ is a company on the leading edge of the treatment of alcohol addiction. At Fresh Start Private™ we have created an innovative alcohol treatment program that empowers patients to succeed where other programs have failed. Our experience has taught us that it is essential to first significantly reduce a patient's cravings for alcohol in order to allow them to successfully recover from alcohol addiction. While patient counselling is a key component of any treatment program, it is often not enough on its own to help a person stop drinking. That is why we have built our program around a state-of-the-art, patented Fresh Start Private™ implant.

Fresh Start Private offers a single-administration, long-lasting, procedure that has been proven and highly effective for well over 5,000 patients to date. This revolutionary and highly effective treatment delivers target therapeutic levels of Naltrexone for up to 180 days and includes a comprehensive care plan from a team of medical professionals for up to twelve months.

To date, more than 5000 patients have received the Fresh Start Private™ Naltrexone implant. With an 85% proven success rate the choice is easy.

Fresh Start Private Program:

Many treatment programs are marketed as cure-alls for multiple types of addiction including alcohol and various types of drugs. In our professional experience, alcoholism is different from other addictions and should be treated as such. For this reason, we have specifically designed our program exclusively for the treatment of alcohol addiction. By focusing narrowly on alcoholism, we are able to tailor our program to those issues and problems that are unique to alcoholics.

Alcoholism is a complex disease of the body, mind and spirit. In order to properly address this addiction, a treatment program must specifically target and treat each of these areas. Programs that do not address the physiological causes of the disease, such as physical cravings for alcohol, do not provide the patient with the best chance for recovery. Likewise, a program that reduces physical cravings but fails to provide a patient with the tools to build and maintain a future without alcohol also falls short. At Fresh Start Private™ we have created a comprehensive recovery program that includes state-of-the-art medical intervention, individually tailored Fresh Start Private™ Coaching Program sessions, rebuilding of family and friend connections and post-treatment continuing care. Only

through a comprehensive treatment solution can a patient have his/her best chance at recovery.

The Naltrexone Implant:

In a minimally invasive, outpatient procedure, trained medical doctors at an independent clinic which forms part of the Fresh Start Private™ network in America insert a specially formulated, biodegradable Naltrexone implant just beneath the skin below the patient's lower abdominal area. The tiny implant contains a drug called Naltrexone which blocks the receptors in the brain that crave alcohol. The implants are completely bio degradable so they gradually dissolve according to the patients metabolism (they do not need to be removed).The procedure is rapid and requires only local anaesthetic. Patients are awake during the short procedure and have reported minimal to no physical discomfort.

Patients have typically reported complete freedom from alcohol cravings within hours of the procedure and a return to normal physical activity by the next day. The rapid-onset of the medication, and the short recovery period allows patients and their loved ones to immediately begin healing and working together towards an alcohol-free life. To facilitate a complete and permanent recovery, patients and their families and friends immediately initiate the Fresh Start Private™ Coaching Program.

Fresh Start Private™ proprietary program is designed to treat and to heal both the mind and the body. The four-tiered treatment approach provides a complete solution that first significantly reduces the physical cravings for alcohol for an extended period, and then works to realign the mind toward a new future and an alcohol-free lifestyle.
